**APF Carbon Reduction Policy Statement**

The Naples Airport Authority (NAA) is committed to reducing the carbon footprint of Naples Airport (APF or the Airport) and mitigating its environmental impact. As part of our dedication to enhancing the quality of life in the surrounding community, a cornerstone of the NAA Strategic Plan is to *Be an Engaged Community Partner*. As such, the NAA has been active in pursuing initiatives that protect the environment and reduce greenhouse gas (GHG) emissions from facilities and vehicles at the Airport when feasible.

As detailed in the 2023 Annual Report, the NAA has implemented multiple efforts to reduce the Airport's carbon footprint, including the introduction of electric equipment and vehicles into the APF fleet. The NAA has replaced some older gasoline and diesel-powered golf carts, aircraft tugs, ground power units, and airport vehicles with zero-emission equipment. The NAA understands the importance of protecting the environment for future generations, and we are committed to continually improving our sustainability practices by reducing the carbon footprint of our facilities and vehicles when possible.

To further demonstrate our commitment to sustainability, NAA is pursuing Airports Council International's (ACI's) Airport Carbon Accreditation (ACA) Level 1 certification. The purpose of the ACA Program is to encourage and enable airport owners to implement best practices in carbon management. Level 1 ACA Certification is the first step in the ACA Program and requires an airport owner to quantify annual GHG emissions within the operational boundary of the airport as defined by the Greenhouse Gas Protocol. While Level 1 does not include the quantification of emissions from aircraft, this certification will allow for us to understand the carbon footprint and inform future efforts to reduce GHG emissions from Airport facilities and vehicles.

The NAA recognizes the importance of protecting the environment and engaging in practices that reduce GHG emissions. The NAA remains committed to reducing emissions where possible and is proud to work with the community to promote sustainable practices now and in the future.

Sincerely,

Christopher A. Rozansky
Executive Director
